Dear Hiring Manager,

In today's fast-paced technology landscape, scalable systems and reliable infrastructure are the foundation of any successful product. With 6+ years of expertise architecting distributed systems and managing 700+ ephemeral environments, I specialize in building technical solutions that scale seamlessly. I am writing to express my interest in joining your engineering team, where I can apply my expertise in system architecture, automation, and reliability engineering to drive impactful technical initiatives.

Currently, as a Senior Cloud Engineer at Manhattan Associates, I focus on solving complex architectural challenges and minimizing operational friction. My recent work has directly impacted system stability, engineering velocity, and overall product reliability:

- **Scalable Architecture & Automation:** I designed and deployed modular Infrastructure-as-Code (Terraform) solutions that reduced environment provisioning latency by 70%. This initiative established standardized, automated deployments across hundreds of distinct environments, significantly accelerating delivery timelines.
- **System Reliability & Observability:** I championed the transition toward an SLO-driven culture. By engineering a high-signal observability stack utilizing tools like Prometheus and Stackdriver, I eliminated alert fatigue and reduced Mean Time To Resolution (MTTR), allowing teams to proactively address issues and focus on feature development.
- **Resilience & Disaster Recovery:** I led the automation of complex Disaster Recovery procedures, successfully reducing the Recovery Time Objective (RTO) from 4 hours to under 2 hours, ensuring critical systems remain highly available and resilient.
- **Security & Network Design:** I designed secure, zero-trust network architectures using Shared VPCs and VPC peering, ensuring systems remain compliant and secure by design without hindering seamless service communication.

I am seeking a role where I can leverage my strategic mindset to optimize system performance, drive automation, and tackle complex engineering challenges. I am confident that my proven track record in managing large-scale distributed systems makes me a strong match for the engineering challenges at your organization. I look forward to the possibility of discussing how I can contribute to your team's continued success.

Best regards,

Rishab Dhar
Senior Cloud Engineer
