

RISHAB DHAR

Bengaluru, KA, India | +91 9791222489 | rishab01dhar@gmail.com | linkedin.com/in/rishab-dhar-69298911b

PROFESSIONAL SUMMARY

Results-oriented Senior Cloud Engineer and SRE with 6+ years of experience architecting scalable, self-healing platforms. Expert in Kubernetes orchestration, Python automation, and Infrastructure as Code (IaC). Proven track record of managing 700+ ephemeral environments, driving toil reduction, and reducing provisioning latency by 70%. Deep expertise in SLO-driven observability, high-availability architecture, and distributed systems.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** Kubernetes (GKE, EKS), Docker, Terraform (IaC), GCP, AWS, IAM, Vault, Serverless.
- **SRE & Observability:** Prometheus, Grafana, ELK Stack, Alertmanager, GCP Cloud Monitoring, SLO/SLI Design, Incident Response (RCA).
- **DevOps & CI/CD:** Jenkins, GitHub Actions, Git, Helm, ArgoCD, Maven/Gradle.
- **Languages & Scripting:** Python (Boto3, Automation), Bash, SQL.
- **Data Stores:** Google BigQuery, Cloud SQL, Google Datastore, PostgreSQL.

PROFESSIONAL EXPERIENCE

MANHATTAN ASSOCIATES	Bengaluru, India
<i>Senior Cloud Systems Engineer</i>	2025 – Present
• Platform Engineering & IaC: Architected and deployed a modular IaC-based infrastructure platform, reducing environment provisioning and maintenance time by 70% across 700+ distinct environments. • Resiliency & High-Signal Alerting: Engineered a high-availability outage framework featuring automated runbooks; implemented SLO-driven alerting and deduplication rules to eliminate noise and significantly reduce Mean Time To Resolution (MTTR). • Toil Reduction & Automation: Championed toil reduction initiatives by developing Python automation for manual provisioning tasks, enabling faster deployment cycles and reducing operational overhead. • Observability & Reliability: Enhanced system visibility by implementing a granular observability stack (Prometheus, Grafana, Alertmanager) with custom SLIs/SLOs to proactively detect anomalies before they impact customers. • Data Reliability & Replication: Implemented Gravina-based real-time data replication with encryption and automated failover, ensuring data consistency between internal and client environments. • Security & Compliance: Hardened platform security through automated IAM role reviews, backup validation, and Disaster Recovery (DR) simulations to ensure business continuity.	

- **Cloud Native Development:** Built and managed fault-tolerant, scalable cloud-native solutions on GCP and AWS using Terraform for infrastructure provisioning.
- **Kubernetes Workload Optimization:** Deployed and managed Spring Boot microservices on Google Kubernetes Engine (GKE), implementing rightsizing, native service discovery, health checks, and autoscaling strategies.
- **Event-Driven Architecture:** Leveraged GCP services including Cloud Functions, Pub/Sub, and BigQuery to support high-throughput, event-driven data processing pipelines.
- **Centralized Logging:** Developed centralized logging and monitoring pipelines using the EFK stack, Grafana, and Prometheus to visualize real-time system performance.
- **Incident Management & RCA:** Led Root Cause Analysis (RCA) for production incidents involving distributed systems (Elasticsearch, RabbitMQ), implementing self-healing scripts to prevent recurrence.
- **Traffic Management:** Tuned NGINX configurations for secure, high-performance load balancing and applied Blue-Green deployment strategies to minimize downtime.

PROJECTS

Enterprise Observability & Incident Response Architecture

- **Scale & Design:** Designed and managed a comprehensive observability stack spanning 700+ GKE clusters, utilizing Prometheus and Stackdriver to centralize metrics.
- **High-Signal Alerting:** Engineered advanced recording rules and alerting strategies to filter noise, significantly improving reliability visibility and actionable performance insights.
- **Unified Incident Routing:** Integrated complex alert routing via Stackdriver and Prometheus, orchestrating hooks into PagerDuty and internal logging tools for rapid triage and consistent incident workflows.

High-Throughput Data Streaming & IaC Integration (CloudSQL + IaC)

- **Multi-Platform Streaming:** Collaborated with R&D to engineer, debug, and deploy multi-platform streaming solutions integrating BigQuery, PostgreSQL, Cloud SQL, and Pub/Sub for robust customer-facing data delivery.
- **Latency Optimization:** Identified bottlenecks and implemented architectural refinements to achieve faster data delivery capabilities, ensuring minimum latency per session.
- **Automation Efficiency:** Developed Terraform/IaC automation modules that reduced architectural setup efforts for the Data Streaming process by 80%, accelerating time-to-market.

GKE Cluster Disaster Recovery (DR) Automation

- **RTO Reduction:** Reduced Disaster Recovery execution time (RTO) from ~4 hours to ~2 hours by automating complex failover procedures using Bash and Jenkins pipelines.
- **Process Reliability:** Established repeatable, audit-ready DR workflows, improving the reliability and documentation of recovery processes across all production environments.

GCP Cross-Project Network Architecture & Peering

- **VPC Peering & Segmentation:** Engineered secure, low-latency connectivity between isolated tenants using Shared VPCs and VPC Peering, ensuring strict network segmentation while maintaining seamless service communication.
- **Traffic Optimization:** Optimized inter-region data transfer costs and latency by implementing custom routes and strategic interconnect configurations for high-volume cross-project traffic.
- **Zero-Trust Security:** Automated firewall rule lifecycle management and network policy enforcement using Terraform, ensuring consistent security posture across peered networks.

EDUCATION

Vellore Institute of Technology

Vellore, India

Bachelor of Technology in Electronics and Communications Engineering

2016 – 2020

- **Relevant Coursework:** Computer Networking, Computer Architecture, Digital Electronics, Coding.

AWARDS

- **MVP & Top Performer Awards:** Recognized consistently (Quarterly/Monthly) for ensuring reliable system performance and operational excellence during critical deployment phases.
